The ASTM standard (E2500) builds on the concepts of GEPs and has substantial implications for reductions in cost and time for pharmaceutical capital investment projects. This first edition of the ISPE Good Practice Guide: Good Engineering Practice covers the complete lifecycle of engineering from concept to retirement.

Good Engineering Practices (GEPs) consist of proven and accepted engineering methods, procedures, and practices that provide appropriate, cost-effective, and well-documented solutions to meet user-requirements and compliance with applicable regulations.

[Good Engineering Practice in Risk-Based Commissioning ...](#)

ISPE Good Practice Guides give practical and technical details on how to apply principles and accepted overall frameworks effectively in specific circumstances. These principles and frameworks may be defined in other ISPE documents (eg, Baseline @ Guides or main GAMP Guide). The Good Practice Guides would then show how to apply.

2. ? INTRODUCTION • Good Engineering Practice (GEP) is defined as combination of standards, specifications, codes, regulatory and industrial guidelines as well as accepted engineering and design methods intended to design, construct, operate, and maintain pharmaceutical and/or biotechnology facilities taking into account not only regulatory compliance but also safety, economics, environmental protection and operability.

Good Engineering Practice (GEP) is established methods and standards that can be applied throughout an engineering activity, project or equipment life-cycle to ensure delivery of appropriate and cost effective solutions. WHY DO WE NEED GEP?

[Sneider Presentation - ISPE Boston](#)

GEP is not mandated by GMP regulations. However, effective implementation and use of GEP principles improves project outcomes, team productivity, cost efficiencies, and also drives technological innovation and compliance. By: Sam DeMarco President, Compliance Team Inc. Quality Management System Policies: Key to Good Engineering Practice Every industry has some kind of associated risk – [...]

Products, solutions and services for GMP A complete package for compliant operations GMP refers to "Good Manufacturing Practice". Covered by different national and international regulations and guidelines, this ensures that pharmaceutical products are consistently produced according to defined quality standards.

Good manufacturing practice (GMP) is a concept that ensures products are consistently produced and controlled according to quality standards. It is designed to minimize the risks to the patient involved in any pharmaceutical production.

Good Documentation Practices should be everyone's concern. Foundation of a sound documentation system begins with the engineering documents as well as their management. Engineering is the provider Production is the customer QA is the gatekeeper.

[Project Setup: From the Beginning until the End](#)

However, Section 6.6 discusses in great detail the need for use of GEP. As a result, PV developed the Audit Assessment Tools (see Figure 3 for an example of content) and an Auditor Workbook to align with the ISPE Good Engineering Practice Guide.
